PROFESSIONAL SUMMARY

Android and application developer building Java apps for POS devices and React Native mobile apps, along with the Node.js APIs behind them on AWS Lambda. Experience integrating device vendor SDKs (Bluetooth printing, payment terminals), adapting builds to different device Android versions, and connecting to government agricultural-market APIs. Familiar with Spring and Spring Boot for backend development.

TECHNICAL SKILLS

Mobile: Android (Java), React Native, TypeScript, React Navigation, React Query
Languages: Java, JavaScript, TypeScript, SQL, Python
Backend and APIs: Node.js, Express, REST APIs, JWT Authentication, Spring, Spring Boot
Database: MySQL, Stored Procedures
Cloud and Tools: AWS (Lambda, API Gateway, S3, SAM, CodeBuild), Git, GitHub, Postman
Web: React.js, HTML5, CSS3, Tailwind CSS

EXPERIENCE

Software Engineer Trainee | ERPDirect Solutions (India) Pvt Ltd Jul 2026 – Present

- Built a retail billing app for supermarket-style stores: a Java POS app for cash counters, tested on Worldline and Paytm devices, with builds adapted to each device's Android version, plus a React Native mobile app. The product is complete and production-ready.
- Implemented mobile self-billing in React Native: staff scan product barcodes to see price and quantity, add items to the bill and print receipts on a mini Bluetooth printer using the device vendor's Bluetooth SDK, avoiding queues at billing counters.
- Built the Node.js/Express REST APIs (MySQL stored procedures, JWT, role-based access) and a React web app for billing and parking reports; deployed the backend on AWS Lambda behind API Gateway using SAM and CodeBuild.
- Integrated a government agricultural-market weighment API into a Java Android app and fixed an SNI SSL issue in Apache HttpClient that was blocking API calls.
- Built a React Native (TypeScript) parking management app covering vehicle entry/exit, monthly passes, dashboards and reports, with JWT authentication, Keychain token storage, a typed Axios API layer and React Query caching.
- Added real-time vehicle security checks with supervisor override, and a token queue with priority tiers and manual, QR, RFID and ANPR intake.
- Test apps and APIs before each release, document defects and resolve them through code review.

PROJECTS

Railway Foreign Object Detection (Improved YOLOv8) | Python, YOLOv8, OpenCV | Team project

- Developed a two-stage railway track intrusion detection system: a lightweight ResNet-tiny classifier, trained with Overhaul Knowledge Distillation, screens images first, and YOLOv8 detects and localizes foreign objects only in flagged images, reducing computation and improving speed over the earlier YOLOv3 approach.
- Prepared and annotated the railway image dataset (normal vs. intruded, with bounding boxes), applied resizing, normalization and augmentation, and evaluated the model using accuracy, mAP and FPS.
- Built a web interface with login, image upload and side-by-side original and processed detection results. Co-authored the research paper "Railway Objects Detection by Using Improved YOLO Algorithm."

Food Frenzy (Food Delivery Web Application) | Java, Advanced Java, MySQL, React.js

- Developed a full-stack food delivery web application similar to Swiggy and Zomato, where users browse food items, add them to a cart, view the bill and place orders for delivery.
- Built the Java backend with MySQL for user management, menus, cart and order processing, and the React.js frontend for the complete ordering flow.

EDUCATION

B.Tech, Computer Science and Engineering | Guru Nanak Institute of Technology 2021 – 2025
Full Stack Java Developer Training | Codegnan IT Solutions 2025

CERTIFICATIONS

- AI Fluency: Framework & Foundations; Claude Code in Action | Anthropic
- ReactJS: The Complete ReactJS Course | Udemy (2026)
