MUNAGANTI BHAVANI SAI

Software Engineer | Java, Spring Boot, Node.js/Express, React, MySQL, AWS
Hyderabad, India | +91 9346232054 | munaganti.bhavanisai@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Software Engineer (B.Tech CSE) with hands-on experience programming, testing, documenting, releasing and maintaining production applications in Java, JavaScript/TypeScript and SQL. Delivered secure, scalable, payment-integrated systems: a multi-tenant SaaS billing platform on AWS Lambda, a React Native parking app, and Java Android apps for eNAM weighment and tourism services. Strong in Core Java, OOP and REST API design, with a disciplined approach to functional/regression testing, code review and clear technical documentation. Quick learner and collaborative team member; Anthropic AI Fluency and Claude Code certified.

TECHNICAL SKILLS

Languages: Java 17 (OOP, Collections Framework), JavaScript, TypeScript, Python, C, SQL
Backend / APIs: Spring Boot, Spring MVC, Hibernate, Maven, Node.js, Express, REST APIs, JWT Auth, JDBC
Frontend / Mobile: React.js (SPA), React Native, Android (Java), React Query, React Navigation, HTML5, CSS3, Tailwind CSS, Bootstrap
Database: MySQL, Stored Procedures, Query Design
Cloud & DevOps: AWS (Lambda, API Gateway, S3, SAM, CodeBuild), Git, GitHub, Docker, Postman, Firebase
Engineering Practices: Functional & regression testing, defect triage and root-cause analysis, code review, technical documentation, release/version management, secure authentication and access control

EXPERIENCE

Software Engineer Trainee, Application Developer — ERPDIRECT Solutions *(June 2026 – Present)*

- Contribute across the full software lifecycle on six business applications (ERP Billing, ERP Parking, eNAM Weighment, Odisha Tourism, e-Dharshan, CA App): development, testing, release, documentation and ongoing maintenance and support.
- Own build, versioning and release management; run functional and regression testing before every release; reproduce and triage defects with clear repro steps and resolve them through code review with the team.

ERP Billing Platform — Full-stack multi-tenant SaaS

React, Node.js/Express, MySQL, AWS Lambda, API Gateway, SAM/CodeBuild

- Built a secure multi-tenant billing platform for retail, restaurants and service businesses: Node.js/Express REST APIs with stored-procedure data access, JWT auth with single-device-session enforcement, and role-based, menu-driven access control across tenants, branches and locations.
- Deployed as an AWS Lambda function behind API Gateway via AWS SAM/CodeBuild; built a React SPA with a centralized API service layer and feature-flag navigation for phased rollout.
- Integrated payment channels (SMS/QR/UPI) and S3 presigned-URL file storage; led an in-place migration that disabled legacy modules through config-driven route/menu guards without deleting code.

ERP Parking — React Native Mobile App (Android)

React Native 0.87 (new architecture, Hermes), TypeScript, Axios, React Query, React Navigation, Node.js/Express, MySQL

- Built the Android client for an ERP parking SaaS (vehicle entry/exit, monthly passes, dashboards, reports, master data) consuming Node.js/Express + MySQL APIs, keeping UI and business-logic parity with the web frontend.
- Designed a typed Axios/TypeScript API layer that normalizes inconsistent backend response envelopes and HTTP-200 error responses; used React Query for server-state caching and invalidation.
- Implemented secure JWT auth with tokens in the OS Keychain, channel-based access control, and interceptor-driven automatic logout on session-invalidating errors.
- Developed real-time vehicle-security checks (debounced lookups, server-enforced DENY_ENTRY/HOLD_EXIT rules, supervisor override via short-lived scoped tokens) and a branch-level token-queue system with priority tiers, manual/kiosk/QR/RFID/ANPR intake and a full operator lifecycle.
- Architected tab/stack navigation with a custom tab bar and stack-reset helper; fixed UTC off-by-one-day date bugs via local-timezone handling.

eNAM Weighment App — Java Android

Java, Android, Apache HttpClient, eNAM 2.0 APIs

- Built and debugged the eNAM 2.0 weighment integration; diagnosed a critical SNI SSL bug in the app's Apache HttpClient that blocked API calls; designed the 9-file integration module.
- Authored the app-flow document used to obtain device credentials from eNAM.

Odisha Tourism App — Java Android

Java, Android, Paytm EDC

- Integrated Paytm EDC payments via deeplink callback; migrated Java package names across the app; resolved Play Store Data Safety form issues for release.
- Also contributed to e-Dharshan and CA App.

PROJECTS

Food Frenzy – Food Delivery App

Java, Spring Boot, Spring MVC, React.js, MySQL

- Built a scalable Spring Boot/Spring MVC backend with RESTful APIs for user management, menus and order processing (reducing manual data handling by ~40%), with a React.js frontend and MySQL CRUD operations.

Railway Objects Detection – YOLOv8 System

Python, OpenCV

- Built real-time railway monitoring using an improved YOLOv8 model, cutting the false detection rate by ~18%.

EDUCATION

B.Tech in Computer Science and Engineering — Guru Nanak Institute of Technology, Hyderabad (2021–2025)
Full Stack Java Developer Trainee — Codegnan IT Solutions (2025): Java, Spring Boot, REST APIs, React.js, MySQL, OOP and Git-based workflows.

CERTIFICATIONS & LEADERSHIP

- AI Fluency: Framework & Foundations and Claude Code in Action — Anthropic | Salesforce Developer — Trailhead Super Badges | ReactJS – The Complete ReactJS Course — Udemy (2026)
- State-level volleyball player; volunteered with NGOs "Smile For All" and Street Cause; participated in HR Conclave 2024.
